

Test Launch Findings

Summary

Milestone: the Tablet Test Launch

The team set out to launch a tablet ordering system/service in 2 of our Sauce and Spoon restaurants. Not only were we able to launch on time, but we capped it off with a amazing launch event.

Now that we've done a test event, the team would like to present the results of our recent survey.

Overview

In order to ensure that we are providing the best customer experience, we had to set some evaluation indicators such as:

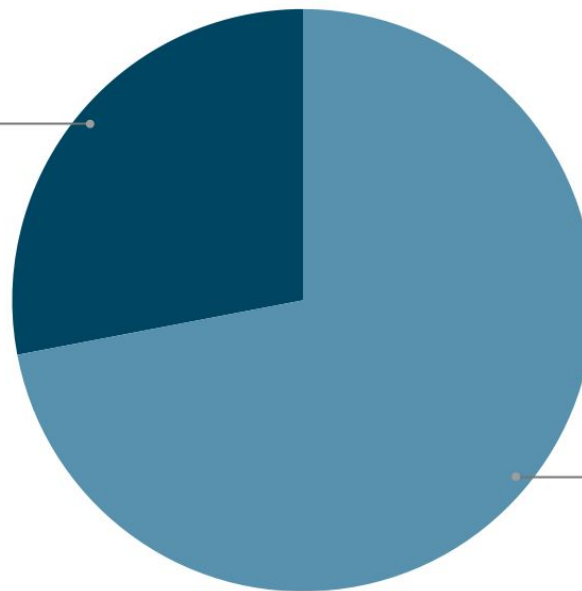

- An average food wait time of eight minutes for appetizers and 12-15 minutes for entrees
- Checkout time of one minute or less via tablets
- Less than 5% of customers who use the tablets to report technical issues each week
- 98% order accuracy
- achieve average wait time of 10 minutes)

Findings

Did the kitchen prepare
your order correctly?

No
28.0%

Yes
72.0%

Did the kitchen prepare
your order correctly?

Next Steps

Based on the survey results my recommendation would be adding an option to allow guests to ask for a waiter if they don't feel comfortable using the tablet alone.

Next Steps

It would be a great idea to ask the vendor to add the option to call a waiter using the tablet system.
