

Project Proposal: Sauce & Spoon Digital Menu Tablet Initiative

Project Proposal

Prepared By: Sebastian Mauldin
Role: Project Manager

Executive Summary

Sauce & Spoon is a growing restaurant chain specializing in scratch-to-table cuisine and partnerships with local farmers and suppliers. Over the last three years, annual sales have increased by approximately 28%, creating new operational challenges related to customer service, employee workload, and order processing efficiency.

To support continued growth while maintaining service quality, this proposal recommends implementing a guest-facing digital menu tablet and integrated point-of-sale (POS) solution across restaurant locations. The proposed solution will streamline ordering, reduce ticketing errors, improve customer satisfaction, and provide management with actionable operational data.

This initiative aligns with organizational objectives focused on operational efficiency, customer experience, and sustainable profitability.

Business Opportunity

Current operational challenges include:

- Increased employee turnover among front-of-house staff
- Order fulfillment delays resulting in customer dissatisfaction
- Manual ticketing errors impacting operational efficiency
- Limited visibility into customer ordering behavior
- Flat profit margins despite increasing sales volume

Internal performance reviews indicate customer wait times have increased by approximately 20%, contributing to negative service reviews and reduced customer retention.

The organization requires a scalable technology solution capable of supporting future growth while improving operational consistency across locations.

Proposed Solution

Implement a fully integrated tabletop digital ordering platform that allows guests to:

- Browse menu items digitally
- Submit orders directly to the kitchen
- Request service assistance
- Access promotions and recommendations
- Complete payment transactions electronically

The system will integrate with the restaurant's existing POS infrastructure and provide real-time operational reporting.

Strategic Objectives

The project will support the following objectives:

1. Improve customer satisfaction and retention.
2. Reduce order processing and ticketing errors.
3. Increase restaurant operational efficiency.
4. Reduce front-of-house workload.
5. Improve table turnover rates.
6. Generate actionable business intelligence through customer ordering data.

Success Metrics

The project will be considered successful if it achieves:

- 25% reduction in customer order processing time
- 15% increase in customer satisfaction survey scores
- 30% reduction in ticketing errors
- 10% increase in average table turnover rate
- 5% increase in average order value through digital upselling opportunities

Key Stakeholders

Stakeholder	Role
Executive Leadership Team	Project Sponsors
Director of Operations	Project Owner
Restaurant Managers	Business Stakeholders
Front-of-House Staff	End Users
Customers	Primary Beneficiaries
Technology Vendor	Solution Provider

High-Level Risks

Risk	Mitigation Strategy
Customer resistance to technology	Pilot program and customer education
Staff adoption challenges	Comprehensive training program
Technology integration issues	Vendor testing and phased rollout
Project schedule delays	Weekly project status reviews

High-Level Timeline

Phase 1 – Project Initiation and Approval

Phase 2 – Vendor Selection and Procurement

Phase 3 – Pilot Restaurant Deployment

Phase 4 – Training and Change Management

Phase 5 – Full Operational Rollout

Phase 6 – Performance Measurement and Optimization

Estimated Duration: 4–6 Months

Expected Business Benefits

- Improved customer experience
- Reduced labor inefficiencies
- Better operational reporting
- Increased revenue opportunities
- Greater scalability for future restaurant expansion
- Improved employee satisfaction through reduced manual workload

Recommendation

Based on operational performance challenges, customer feedback trends, and projected growth objectives, implementation of a digital menu tablet solution is recommended.

The proposed initiative supports Sauce & Spoon's long-term strategic goals by improving efficiency, enhancing customer satisfaction, and enabling sustainable growth through technology-driven operational improvements.
